

Amy B. Lewis, M.D.

and her expert team are proud to provide advanced dermatological services to men and women

Dr. Lewis specializes in providing her patients with non-surgical treatments that keep their skin looking and feeling healthier than ever before. We eat healthy and work out yet we still have areas on our bodies that hold onto stubborn pockets of fat.

Emsculpt NEO is a comprehensive, non-invasive body sculpting treatment that helps patients simultaneously build muscle and reduce stubborn fat. Powered by a unique combination of radiofrequency (RF) and high intensity focused electromagnetic (HIFEM) technology, the radiofrequency (RF) energy carefully heats and damages fat cells, prompting their removal from the body. Patients can achieve dramatic body sculpting benefits in the abdomen, buttocks, legs and arms.

The benefits of Emsculpt NEO:

- Reduce fat & build muscle in one treatment
- 25% increase in muscle volume (on average)
- 30% reduction in fat (on average)
- Treats patients up to BMI 35
- Comfortable, non-invasive, 30-minute treatment session
- No downtime or recovery period
